

SmarttNet Offsite Backup

SmarttNet **MyBackupServer** is a comprehensive data protection system. SmarttNet offers an easy-to-use and reliable backup solution to ensure that important business and personal data is protected and is readily available when needed.

Easy to use, simple to maintain

On the client-side, functions are cleanly laid out and buttons are self-explanatory. Backup, restore and configuration can be done typically within a few clicks.

Secure data storage, multiple levels of protection

Data are encrypted and compressed before being uploaded and stored on the Backup Server. To further assure your data safety, all data are being replicated to a second server. Moreover, the data synchronization is close to real-time. By having offsite copies, your data can thus be protected from fires, natural disasters, wars, etc.

Specialized backup agents for popular applications

MyBackupServer has specialized backup agents for a range of applications, namely, MS Exchange Mail Level agent, MS Exchange Server agent, MS SQL Server agent, Oracle Database agent, My SQL Database agent and Lotus Domino/Notes Server agent.

More reliable and faster backups

MyBackupServer comes with a flexible backup scheduler. You can easily implement the desired backup policies. Moreover, MyBackupServer can backup open files, e.g. your Microsoft Outlook mailboxes can still be backed up while you are working with your emails. Furthermore, backup of larger files can be completed in much shorter timeframe with MyBackupServer's In-File Delta option, which minimizes data transfer by uploading only the modified data blocks.

Simple, smart restore from anywhere at anytime

MyBackupServer web interface allows you to restore your backup files from anywhere at anytime. Moreover, MyBackupServer provides flexible retention policy settings that allow you to restore snapshots of your data sets as of a particular point in time to recover a past version of a file due to whatever reasons.

System Requirements

Client Software/MBS Manager

Operating System: Windows 95/98/ME/NT/2000/XP/2003, Linux Kernel 2.2 or above (e.g. Red hat Linux 6.x or above), Solaris 2.x or above, Mac OS X, Netware 5.1 or above, and all other platforms supporting Java2 Runtime 1.3.1 or above.

Memory: 128MB (minimum), 256MB (recommended)

Disk Space: 100MB

Network Protocol: TCP/IP (HTTP/HTTPS)
